

EPPCO Distribution achieves oil drain interval (ODI) of 35000 KM by using Caltex Delo® 400 MGX and Caltex Lubewatch Program.

EPPCO Distribution is a leading fuel distribution company in the UAE. They operate a large fleet of trucks to distribute fuel to retail stations and end-customers in Dubai and the Northern Emirates. On-time deliveries are critical to their business.

The company runs a large fleet of modern trucks ranging from engines fitted with the latest emissions technology Euro III to Euro V. Maintaining a technologically diverse fleet running at optimum productivity with minimum product diversification, has become a challenge for the fleet manager. Lubricants play a crucial role in keeping the trucks operating reliably, which results in a profitable operation of the business.

"We operate a fleet of Scania trucks that must be available almost 99% of the time. Downtime for us is not acceptable as it could result in a run-out at our end customer locations, leading to the general stoppage of commuter traffic and transportation in the UAE. So the stakes are high" said Ahmed Al Mulla, Senior Manager Distribution, Eppco Distribution.

EPPCO distribution has benefited by switching to Caltex Delo® 400 MGX SAE 15W-40, supported by Caltex LubeWatch Oil Analysis Program, which resulted in benefitting the company by reducing down time and cost. The initial plan was to raise ODI from 20,000 km to 30,000 km while running on ULSD

with a maximum 10ppm sulphur content. After six months of testing, they exceeded the initial objective and raised ODI to 35,000 km. Which met and exceed the project oil drain extension target.

"We went from changing the oil every 20,000 km to changing it every 35,000 km with no unscheduled down time attributed to lubrication issues thanks to Caltex Delo® 400 MGX."

The results

After more than one year of using Caltex Delo® 400 MGX SAE 15W-40, EPPCO Distribution continues to enjoy the benefits of extended oil drain and high reliability across their fleet.
